Research Agenda: Make Data & AI Systems
more useable, efficient, for NHR

REVISIT DATA & AI SYSTEM STACK

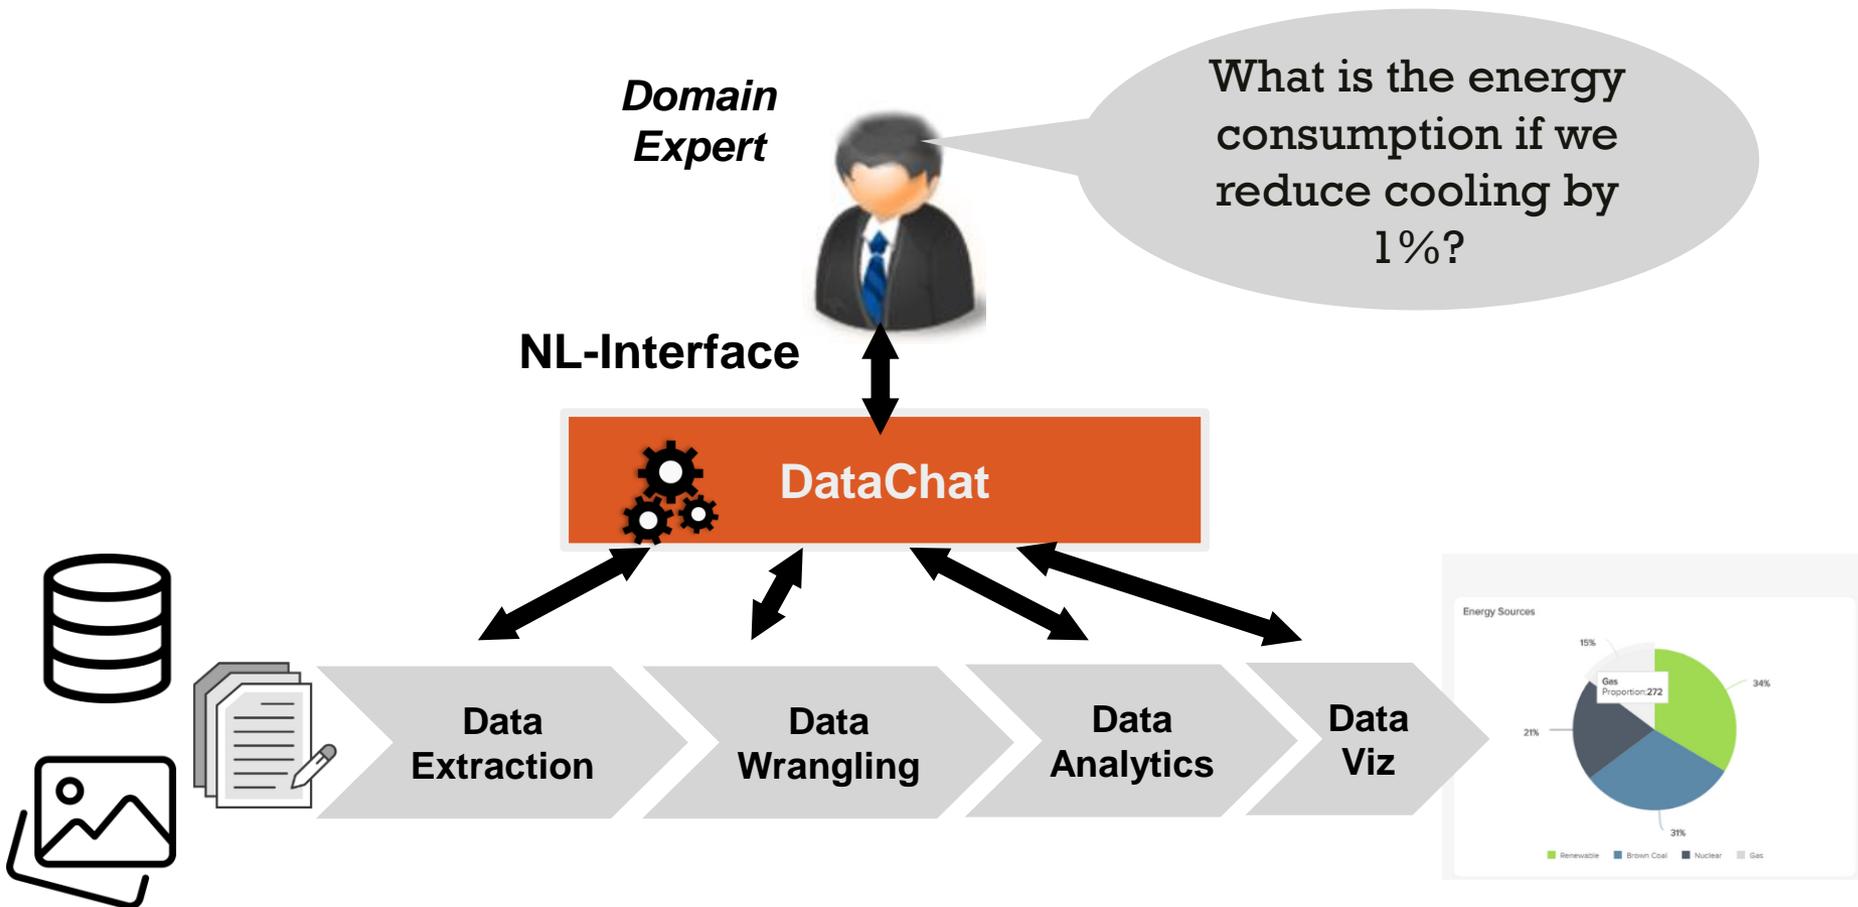

HOW ARE DATA & AI PIPELINES BUILT?

Today: Manually-composed “pipelines”
→ high overheads + expert skills needed

FUTURE: CONVERSATIONAL DATA & AI

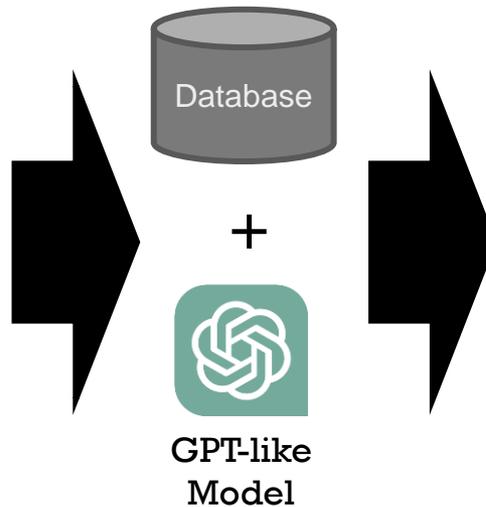

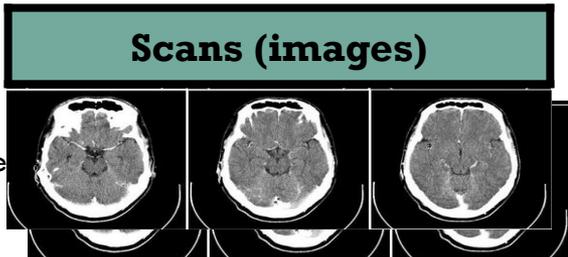

Idea: Use AI to automate construction pipelines
→ reduce high manual overheads

DIRECTION 1: DATA EXTRACTION

[SIGMOD'23, Another paper submitted]

Patients (table)		
name	age	gender
Alice	42	f
Bob	23	m

Examinations (text)
Alice was diagnosed with fever ...

What is the **age** and **diagnosis** of patient **Alice**?

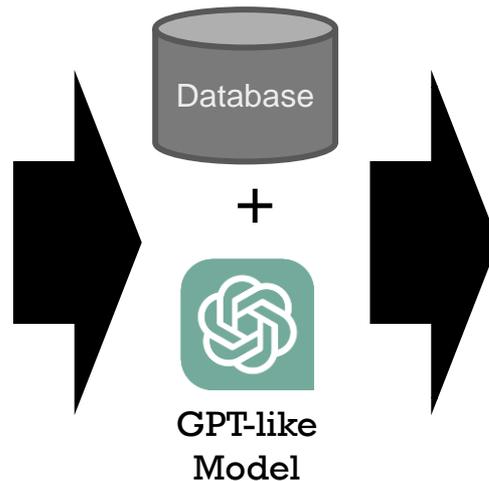

Use a GPT-like model to “query” a mix of table, text, image data

DIRECTION 2: DATA AUGMENTATION

[AIDM@SIGMOD'23]

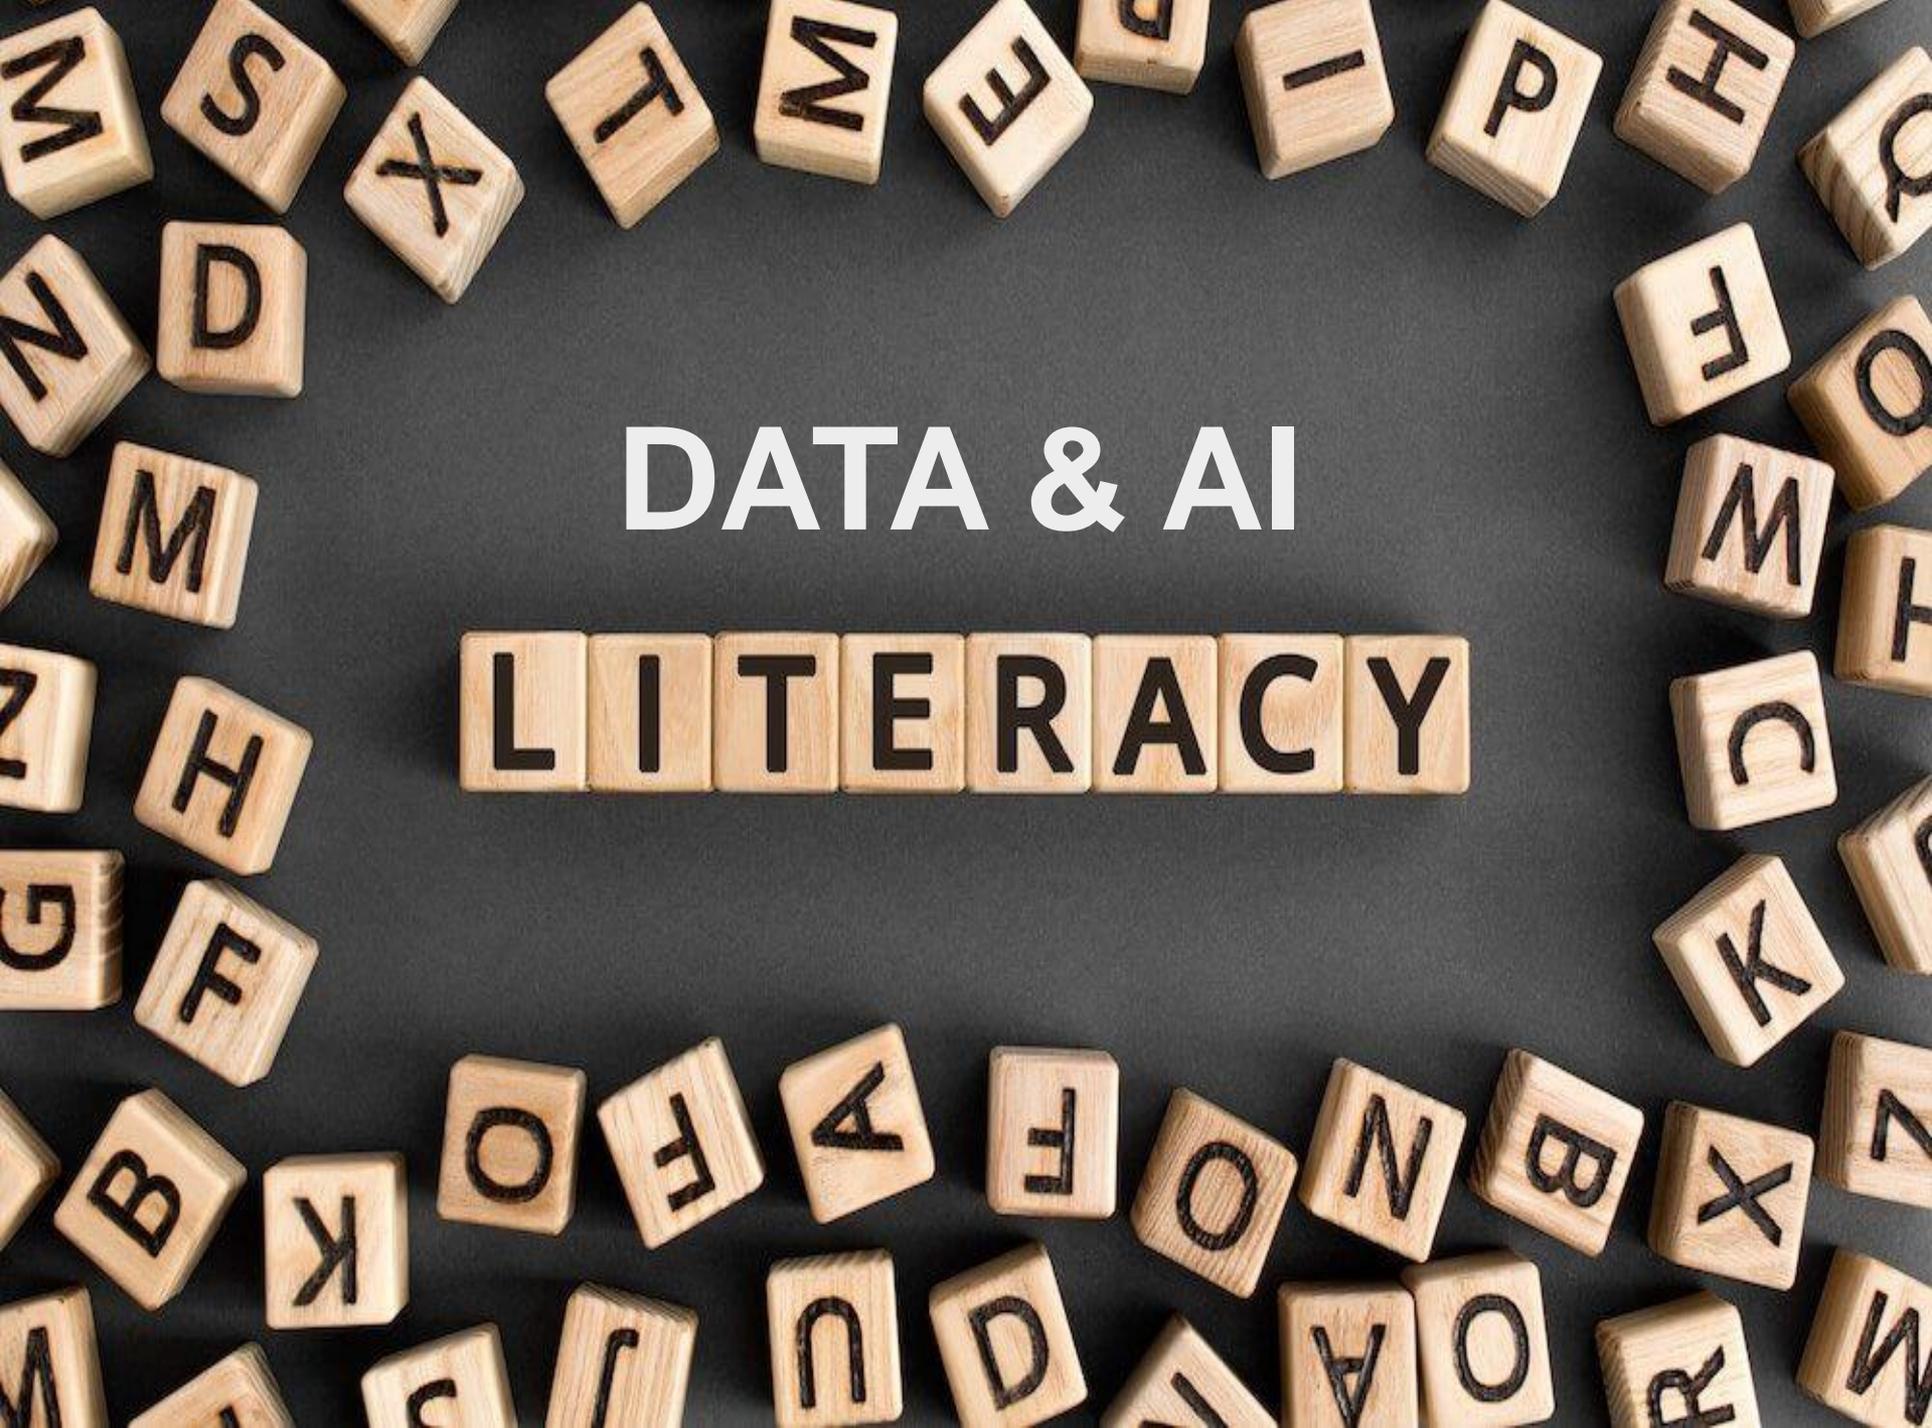

movies		
movie	genre	revenue
Avatar	Sci-Fi	2.74B \$
Avatar2	Sci-Fi	2.24B \$

actors (GPT-table / virtual)		
movie	actor	age
Avatar	Zoe S	...
Avatar	San W	...

What is the **average revenue** of movies with **actor „Zoe S“**?

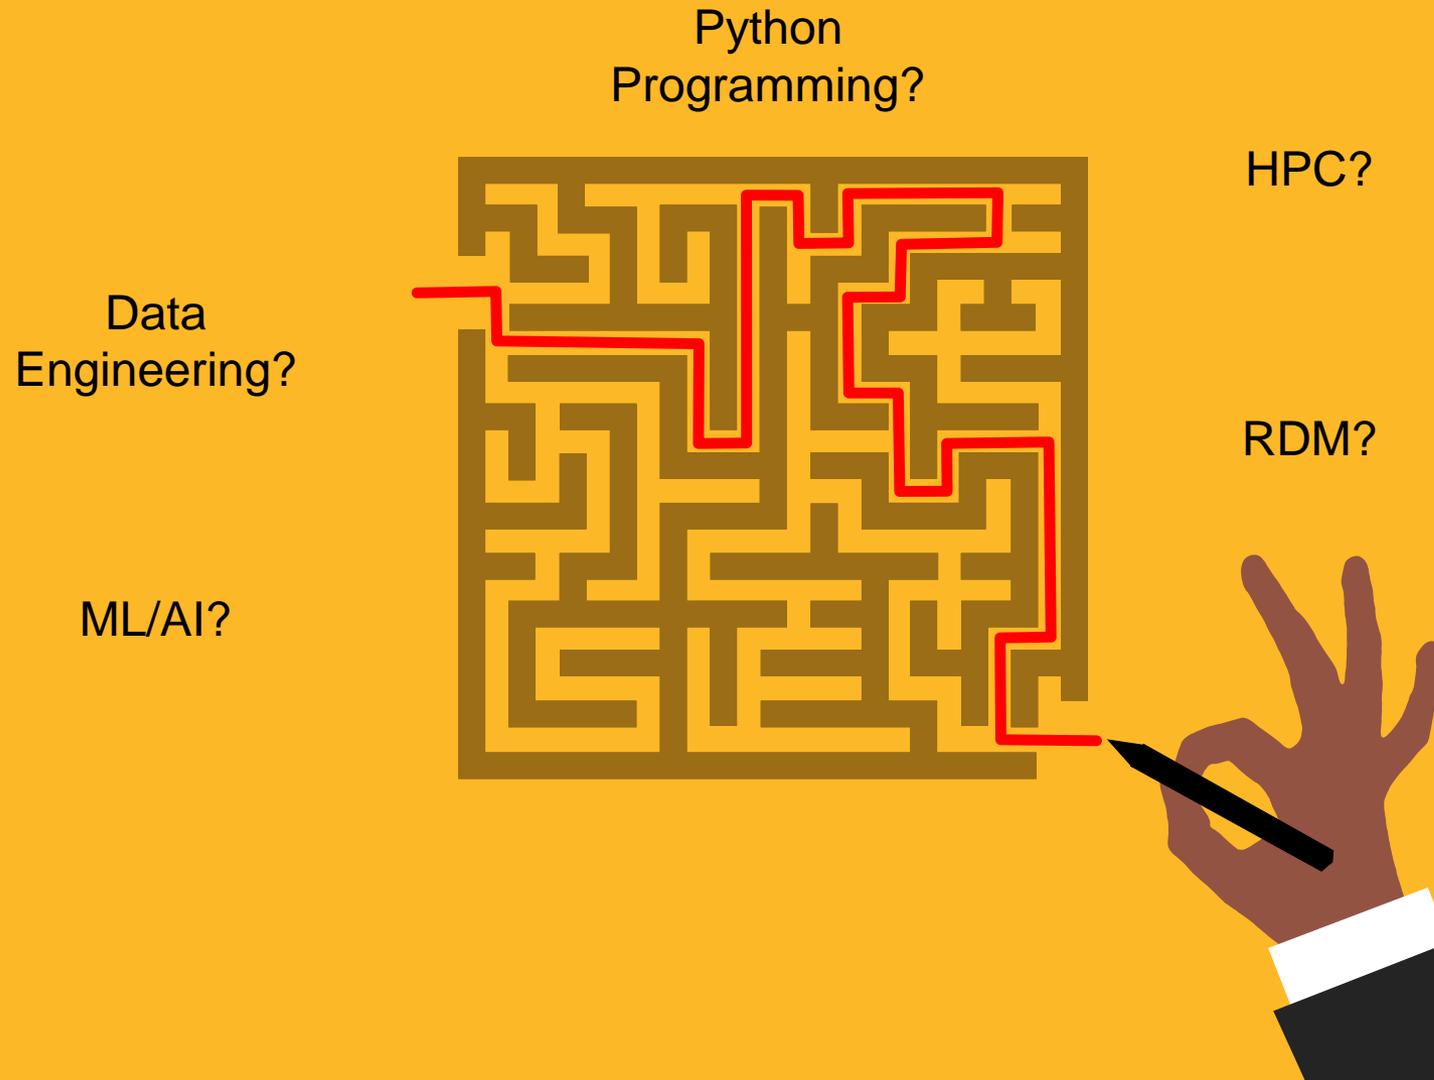

Use a GPT-like model to augment data with external “world-knowledge”

The image features a dark grey background with numerous light-colored wooden letter blocks scattered around. In the center, the words "DATA & AI" are written in a white, bold, sans-serif font. Below this, the word "LITERACY" is spelled out using seven wooden blocks, each with a black letter. The surrounding blocks are arranged in a circular pattern, showing various letters of the alphabet in a similar wooden texture and black font.

DATA & AI EDUCATION: HIGHLY INDIVIDUALIZED DEMANDS

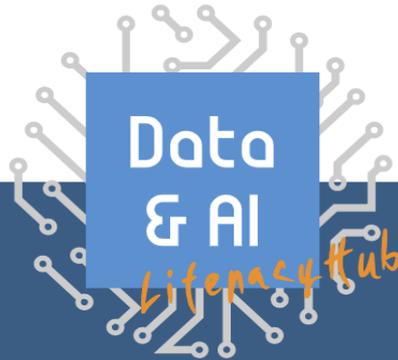

Where to
start?

DATA & AI LITERACY HUB 4 NHR

<https://data-ai-literacy.ml/>

Start with one of our learning paths:

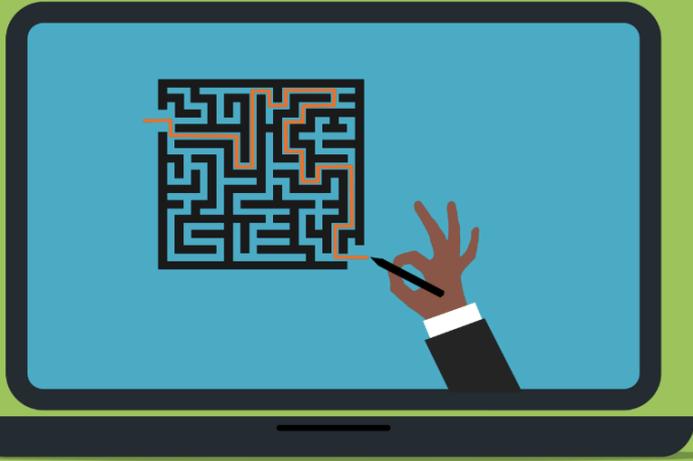

[Not sure what to choose?](#)

START LEARNING

The Data and AI Literacy Hub is a guided learning platform that offers individual learning paths for different backgrounds and skill levels. It enables you to develop the skills necessary to navigate the data-driven world and apply AI techniques in custom projects.

Learning Paths

Our carefully curated learning paths guide you in finding learning resources that fit your needs and level of knowledge.

3  source: Interactive Course from Prisma
4  description: |
5  The beginner-friendly course „The Data Science Pipeline“ is a great way to get an
6  overview about all the essential steps in data science, from acquiring data to
7  building and evaluation models. You’ll get to know different sources to acquire data
8  and learn ways to clean and wangle your data to make it ready for analysis. You’ll get
9  hands-on experience in building a first model to make predictions with popular data
10 science tools and libraries.
